3. **Decompression self-braking caster; stool will not move away without seating.**
4. **Snap in and out removable seat & back cushions in case of damage or color change in the future.**

Stool Functions

Seat Height

The height of the seat can be adjusted by pulling the seat height lever upwards and releasing to desired height while the occupants take their weight off the stool.

Seat Tilt

The seat has 5 degrees of forward and 10 degrees of rearward tilt.

Push the handle downwards to "free float" the movement and lift upwards to lock in any position.

Back Movement

The back has 13 degrees of forward movement and 10 degrees of rearward. Push the lever downwards to "free float" and lift upwards to lock in any position.

Back Height

Simply lift the back upwards slowly and it will lock in the desired position.

To re-adjust, lift the back to the very top and it will automatically release the lock and allow the back to go back to the lowest position. You can then adjust the height by lifting the back upwards slowly to the desired height.
